SUMMARY

I'm a Full Stack developer at the start of my career, currently studying Systems Analysis and Development and working as a development intern at Agência VoêFly. I'm also the founder of Base4 Systems, where I'm building B4 Charge, a multi-company financial SaaS I've been developing from scratch that's now in its final testing phase before commercial launch. At my internship I work with PHP, Laravel and MariaDB and use Python to automate manual processes; in personal projects I use React, TypeScript and Node.js, with database modeling (MySQL and PostgreSQL) and API integration. I value clean code, security and a good user experience, and I've had the chance to lead a team, which helped me learn fast and apply that to real deliveries.

EDUCATION

Systems Analysis and Development Technology

In progress

Unisaesiano · 2025-2027

Higher-education program focused on software engineering, databases, systems architecture and IT project management.

Technical Course in Systems Analysis and Development

Completed

SENAI Avak Bedouian · 2023-2024

Technical foundation in programming logic, data structures, object-oriented programming and relational database modeling.

PROFESSIONAL EXPERIENCE

Development Intern at Agência VoêFly

2026-Present

Internship · On-site

- I build and maintain the group's multi-brand institutional website (ViajaFlux, VoêFly and events), shipping features and maintenance work on a recurring basis and keeping visual consistency and responsiveness across the brands.
- I collaborate on the participant portal for the Viajaflux Summit, a system with multiple access profiles (attendee, sponsor, organizer and service provider), sized for the event's expected volume of around 2,000 attendees.
- I built the second default template for ViajaFlux's website builder, where the end customer creates their own site within the platform, working on both the database and the screens.
- I build Python automations for processes the team used to handle manually.
- I fix bugs, including form issues where data wasn't loading or submitting correctly, always tracking down the root cause.

Young Apprentice & Group Leader at SENAI Avak Bedouian

2023-2024

Apprenticeship · On-site

- I led a group of 5 people building a library and inventory management system for the school.
- I built the entire backend on my own, including all the CRUDs and the security layer, with a focus on Python and relational databases.

CERTIFICATIONS

AI Agents Immersion

Hashtag Treinamentos · 2026 · 8h
AI agents integrating LLMs with external tools and data sources.

Cybersecurity with Fortinet Solutions

SENAI Avak Bedouian · 2024 · 40h
Firewall, network segmentation, access control and data protection.

Python Programming

SENAI Avak Bedouian · 2023-2024 · 160h
Logic, data structures, OOP and integration with relational databases.

Python Journey

Hashtag Treinamentos · 2026 · 8h
Python for automation and data handling, reading from and writing to databases.

Python on Raspberry Pi

SENAI Avak Bedouian · 2024 · 40h
Sensor data collection, local database persistence and IoT automation.

English

Wizard · 2023
Technical documentation reading, writing and conversation.

SKILLS

FRONTEND

React React Native TypeScript JavaScript

Tailwind CSS DaisyUI

BACKEND

Node.js PHP Laravel Python Flask Java

DATABASE

MariaDB MySQL PostgreSQL Supabase

TOOLS & AI

Git Figma Vercel ChatGPT Claude

LANGUAGES

Portuguese

Native

English

Intermediate

I use English to read technical documentation, write code and take part in code reviews.

FEATURED PROJECTS

B4 Charge **FEATURED**

2025-Present

Multi-company financial SaaS

I'm the founder of Base4 Systems. I created B4 Charge after seeing firsthand how much manual cash control and billing was costing companies in time. The most complex part I built was the automated billing bot: it messages customers directly through WhatsApp, without needing to open WhatsApp Web, and automatically reads invoices and payment receipts. I also built the multi-tenant architecture, automatic installment generation and automatic cash-register entries, plus a Master Panel to administer the platform.

Company site: base4systems.com.br

React Node.js Express MySQL Multi-tenant

WhatsApp API

Nexo

2026

Personal finance tracker

I built a personal finance platform with dashboards, savings goals, category budgets and an investment portfolio. Each user's data is isolated with Row Level Security in Supabase.

React TypeScript Supabase

Obsidian Auto Detailing

2026

Company landing page

I built a premium landing page for a high-performance auto detailing business, using TanStack Start, React 19 and Tailwind CSS v4.
